Portfolio

Education

ESPRIT — School of Engineering 2022 – 2027 (Expected)

Engineering Degree in Computer Science / *Specialty: ARCTIC (Cloud Computing & DevOps)*

Key coursework: Software Engineering, Data Structures & Algorithms, OOP, Web Development, Cloud Infrastructure

Technical Skills

Languages	Java, Python, JavaScript/TypeScript, PHP, SQL
Frameworks	Spring Boot 3, Angular 18, React 18, Laravel 12, JavaFX, Symfony, Qt
Cloud & DevOps	Docker, Kubernetes, Ansible, OpenStack, Nginx, Karmada, Azure AKS
AI / ML	LLM integration, Python data science (pandas, scikit-learn)
Tools	Git, Maven, Linux, WebSocket/STOMP, CesiumJS

Experience

Full-Stack Developer Intern Jun – Aug 2025

Smart Skills | El Ghazela Technology Park, Ariana

- Built **MySkills**, a multi-role training management platform (Admin, Coordinator, Trainer, Trainee) using **Laravel 12**, **React 18**, and **MySQL**
- Implemented role-based access control and REST API authentication with **Laravel Sanctum**
- Developed automated certificate generation (**Intervention Image** + **ImgBB API**) and dual-channel notifications (in-app + email)

Operations Intern Jun 2023

Tunisair | Tunis-Carthage International Airport

Observed ticketing, refund processing, and daily airline operations.

Projects

Elif 🐙 — Pet-Care Platform with Multi-Cluster Orchestration 4th Year | Team

- Developed the **Community module** — threaded forums with hot/new/top ranking and real-time WebSocket chat with AI summarization (**Groq**) — using **Angular 18**, **Spring Boot 3**, and **MySQL**
- Deployed a production **Kubernetes** cluster on a private **OpenStack** cloud provisioned with **Ansible**; federated multi-cluster workloads across on-prem and **Azure AKS** via **Karmada**
- Configured HA infrastructure: **NGINX Ingress**, **Octavia**, **kube-vip**, and automated backups (mysql-dump, rsync, etcd snapshots)

AtlasMesh 🐙 — Real-Time 3D Geospatial Dashboard Personal

- Aggregated 18 live data sources (aircraft, ships, ISS, Starlink, earthquakes, weather) on a **CesiumJS** 3D globe with **Node.js** + **TypeScript**
- Built real-time WebSocket diff-based updates with **SGP4** orbital propagation for satellite trajectory computation; applied occlusion culling and entity clustering across 15 000+ live entities
- Deployed at atlasmesh.onrender.com

- The 12th Man** 

— ML-Powered Football Predictions

4th Year | Team
- Predicted Premier League standings, match outcomes, and emerging player talent using **Python** (pandas, numpy, scikit-learn) with a web front end
 - Engineered features from multi-season match data; evaluated Logistic Regression, Random Forest, and XGBoost models against historical baselines
- WamiaGo** 

— Transportation Management Platform

3rd Year | Team
- Contributed to the **electric bicycle management module** in a **JavaFX/MySQL** desktop app with QR-based rentals and real-time tracking
 - Developed a companion **Symfony/PHP** web platform sharing data models with the desktop app for cross-platform operation
- Ripple Insurance System** 

— IoT Accident Detection

2nd Year
- Simulated real-time accident detection using **C++**, **Qt**, and **Arduino** sensor integration with automated alert dispatch

Languages

Arabic	Native
English	Advanced — professional proficiency
French	Intermediate (B1)
