

Malek Bsaissa

dev.malekbsaissa@gmail.com | +216 90 168 022 | Ariana, Tunisia | malekbsaissa.vercel.app | github.com/AtfastrSlushyMaker | LinkedIn
Final-year Cloud Computing engineering student seeking an end-of-study (PFE) internship as a Cloud & DevOps Engineer.

PROFESSIONAL EXPERIENCE

Banque de Tunisie	Jul 2026 – Aug 2026
Full-Stack & Cloud Engineering Intern Tunisia	
- Built MEMO, a multi-tenant workplace operations platform (HR, IT, rooms, facilities) with Angular, Spring Boot and PostgreSQL, including messaging, audit trails and a platform administration console - Containerized services with Docker, built CI/CD with GitHub Actions and Terraform deployment, added Prometheus/Grafana monitoring - Integrated a FastAPI AI assistant with streamed, source-grounded answers, with authorization enforced by the Spring backend	
Smart Skills	Jun 2025 – Aug 2025
Full-Stack Developer Intern Ariana, Tunisia	
- Built MySkills, a training management platform serving 4 user roles (administrators, coordinators, trainers, trainees) with Laravel, React and MySQL - Implemented REST APIs, Sanctum auth, role-based access control, approval workflows and automated certificates	
Tunisair	Jun 2023
Operations Intern Tunis-Carthage Airport	
Supported ticketing, refund processing and daily airport operations	

PROJECTS

Hybrid Cloud Infrastructure	2026
Academic team project – OpenStack, Kubernetes, Ansible, Karmada, Azure	
- Automated OpenStack provisioning (Heat) and Kubernetes cluster setup (kubeadm, Ansible); federated the private cloud with a public Azure cluster through Karmada - Configured 6 propagation policies; ran 4 replicas split across 2 clusters, monitored with Prometheus/Grafana	
Boundless – AI Game Master	2026
Personal project – Next.js, FastAPI, PostgreSQL + pgvector, Docker Compose	
- Built a local-first AI text RPG whose streaming turn pipeline lets the LLM only propose state changes; the backend validates, reconciles and commits them transactionally - Long-term memory via pgvector hybrid retrieval, branching timelines, pluggable LLM providers (MLX, Ollama, DeepSeek)	
AtlasMesh	2026
Personal project – React, CesiumJS, Node.js, TypeScript, WebSocket	
Combined 18 live data sources on a 3D globe with real-time updates, satellite orbit propagation, entity search and toggleable map layers	
Elif & Elif AI Agent	2025 – 2026
Team project – Angular, Spring Boot, MySQL, WebSocket, FastAPI	
Built community module (discussions, moderation, real-time chat) and a FastAPI/Groq natural-language search agent	
The 12th Player & WamiaGo	2024 – 2026
Team projects – Python, scikit-learn, FastAPI, React / JavaFX, Symfony, MySQL	
Football analytics ML models (KNN, Random Forest, KMeans, LightGBM); electric-bicycle rental module with QR-code unlocking across desktop and web apps	

EDUCATION

ESPRIT School of Engineering	2022 – 2027 (expected)
Engineering Degree (Master's level) in Computer Science, Cloud Computing specialization	Ariana, Tunisia

OTHER

- Certifications:** Aviatrix Certified Engineer (ACE) – Multicloud Network Associate (2025); Hedera Certified Foundation (HCF) & Hedera Certified Developer Associate (HCDA) – blockchain
- Badges:** AWS Academy Cloud Operations
- Cloud & DevOps:** AWS, OpenStack, Kubernetes, Docker, Terraform, Ansible, GitHub Actions, Linux, Prometheus, Grafana
- Development:** Java (Spring Boot), Python (FastAPI), TypeScript (Angular, React, Next.js, Node.js), PHP (Laravel, Symfony)
- Data & AI:** PostgreSQL, pgvector, MySQL, Redis, scikit-learn, LLM integration (RAG, tool calling, Ollama, MLX)
- Interests:** Building fun side projects – AI games (Boundless), live 3D maps (AtlasMesh), self-hosted home lab
- Languages:** Arabic (native), English (advanced), French (basic)
